

## 1990 Aerostar, Bronco, Econoline, F-Super Duty, F-150, F-250, 1991 Explorer Proper Caliper Lubrication

To help minimize sticking, binding, grabbing and premature brake pad wear complaints, lubrication of the brake caliper to spindle (top and bottom "V" groove, abutment surfaces and knuckle shoe rails as shown in the figure) is necessary during maintenance. This lubrication could also contribute to elimination of drift while braking and steady state drift complaints. Lubricate the specified points only when required by the vehicle maintenance schedule and use disc brake slide lubricant.
